

## Alteryg Freedom Power™ System Cabinets

Alteryg Freedom Power fuel cell systems are fully integrated, self contained, high efficiency power systems designed for indoor or outdoor use. Cabinets designed specifically for the Alteryg Freedom Power System are available for both temperate and severe climates. Hydrogen fuel storage cabinets are also available in several size configurations.

### The Alteryg Freedom Power SYSTEM CABINET

- Footprint: 26" W x 34" D (41" intake) x 72" H
- Each cabinet capable of housing a 10kW fuel cell system
- Optional: Transfer Power Module (TPM), appropriately sized
- Optional: Integrated Power Cabinet (IPC) application
- Optional: Remote system monitoring and management communications

## Alteryg Freedom Power FUEL STORAGE CABINETS

The Alteryg Freedom Power System supplies and stores hydrogen fuel at the point of use and supports two fuel storage cabinet options:

- High pressure, refillable composite tanks (recommended)
- or
- Steel, swap-out cylinders sometimes called K-bottles.

Both cabinet options are made of corrosion resistant materials and highly durable components for superior service even in harsh environments.

Their compact footprint and relative light weight make these fuel storage cabinets ideal for small spaces and rooftop installations.

Available through lease or purchase, these fuel storage cabinets are certified to meet applicable safety standards.
