ALTERGY'S FREEDOM POWER SYSTEMS TO POWER MAJOR TELECOM NETWORK UPGRADE

FOLSOM, CA – August 3, 2012 – Altery is pleased to announce that it has received an order for 1,000 of its 7.5kW Freedom Power fuel cell systems to power a major upgrade to one of the nation's largest wireless telecom carriers.

These integrated systems will house the carrier's transceivers stations, DC plant; Altery's advanced fuel cell power system, equipment thermal management system and enough fuel for 8 to 24 hours of runtime, in an integrated, compact package.

"We believe that this product is the future of wireless telecom. It converts and manages the DC power required for site operation, houses the base transceiver stations, provides the backup power to assure continuous communications capability demanded by wireless customers. These systems also replace batteries and generators and provide equipment protection and shelter, all at a lower cost than typical batteries and generators and allows for rapid deployment and rapid expansion of site capacity. It is truly the future," said Eric Mettler, Altery's President and CEO.
